

- FDA-regulated, software-based, prescription digital therapeutic (PDT) in development for treating diabetes
- Delivers cognitive behavioral therapy to enable changes in neural pathways of the brain and lead to lasting behavioral change

HOW IT WORKS:

Prescription Digital Therapeutic

Regulated and prescribed mobile application, used under physician supervision, provides the delivery system for behavioral therapy

Cognitive Behavioral Therapy (CBT)

To initiate, advance and maintain behavioral change, our proprietary CBT targets cognitive patterns that drive eating and lifestyle behaviors

Personalized Treatment

A treatment algorithm sets the right pace, intensity and level of support needed to maximize efficacy for each individual
